

Billions of U.S. Dollars in Circulation

Please send your comments and suggestions to David Lanners at: leaderhelper@gmail.com

Interpreting the Table of Data from the Federal Reserve Bank in St. Louis regarding U.S. Dollars in Circulation

With no significant change in U.S Dollars in circulation after June 1, 2011 we can calculate the following:

Year To Year	The previous record "Year-To-Year" increase of 28.0% in the U.S. Dollars in Circulation occurred in September 1939. That "Year to Year" record increase was broken in October 2008 with a new "Year to Year" record 33.4% increase. The "Year to Year" increase continued to set new all-time records each month until it reached 109.1% in May 2009. The "Year to Year" increase remained above the 1939 record through February 2010 when it was still measuring 35.3%
12-month Rolling Average	The previous record "12-month Rolling Ave." increase of 25.2% in the U.S. Dollars in Circulation occurred in July 1940. That "12-Mo. Rolling Ave." record increase was broken in January 2009 with a new "12-Mo. Rolling Ave." record 27.4% increase. The "12-Mo. Rolling Ave." increase continued to set new all-time records each month until it reached 93.4% in October 2009. The "12-Mo. Rolling Ave." remained above the 1939 record through August 2010 when it was still measuring 28.1%
24-month Rolling Average	The previous record "24-month Rolling Ave." increase of 49.3% in the U.S. Dollars in Circulation occurred in April 1941. That "24-Mo. Rolling Ave." record increase was broken in Sept. 2009 with a new "24-Mo. Rolling Ave." record 50.2% increase. The "24-Mo. Rolling Ave." increase continued to set new all-time records each month until it reached 116.2% in October 2010. The "24-Mo. Rolling Ave." increase will remain above the 1941 record at least through Mar. 2012 when it will still measure 49.3%
36-month Rolling Average	The previous record "36-month Rolling Ave." increase of 58.9% in the U.S. Dollars in Circulation occurred in August 1946. That "36-month Rolling Ave." record increase was broken in Mar. 2010 with a new "36-month Rolling Ave." record 62.7% increase. The "36-Mo. Rolling Ave." increase will continue to set new all-time records each month until it reaches 141.0% in October 2011. The "36-Mo. Rolling Ave." increase will remain above the 1946 record at least through Jan. 2014 when it will still measure 60.5%
48-month Rolling Average	The previous record "48-month Rolling Ave." increase of 76.9% in the U.S. Dollars in Circulation occurred in October 1946. That "48-month Rolling Ave." record increase was broken in Nov. 2010 with a new "48-month Rolling Ave." record 77.6% increase. The "48-Mo. Rolling Ave." increase will continue to set new all-time records each month until it reaches 162.8% in October 2012. The "48-Mo. Rolling Ave." increase will remain above the 1946 record at least through Feb. 2015 when it will still measure 80.0%

Conclusion: The U.S. has lowered the value of its currency by half, and negative impacts will increase steadily at least through 2012.
