

1) PM of Technical Document Management System (TDMS) 2007-2008 Project

Provide functionality required to meet requirements and provide updates in support of a more user friendly environment. Key objectives include ease of data transfer, clear consumer and customer data and single point of entry for BOMs, technical plant and product data. Manage implementation of deliverables - product labeling, SAP interfaces, product regulatory compliance, and experimental costing for both Beverages/Confectionary globally, ensuring that IT delivers to schedule/budget.

(488 Characters)

Project involved 44 deliverables to a global application in support of an enhanced user friendly environment. Key objectives included ease of data transfer, clear consumer and customer data and single point of entry for BOMs, technical plant and product data. Managed the project from initiation, through planning and execution of deliverables. Ensured that monitoring and controlling processes were followed through to closing for each deliverable. The outcome met all customer expectations. (496 Characters)

2) PM of Concur Travel and Expense Upgrade Project.

Project involves upgrading the current version of hosted solution to benefit the Americas region. Scope includes functional and technical design/deployment of a software upgrade, interfaces to corporate card providers, banking, and SAP ledger systems. Ensure implementation of new Concur ReportNet service and associated data exchange. Manage functional/technical resources, partnering with Concur, for knowledge transfer throughout the project life cycle to effect transition to support. (490 Characters)

Project involved upgrading the current Concur T&E hosted solution. Scope included design and deployment of the solution, interfaces to corporate card providers, banking, ledger systems and installation of ReportNet service. Managed functional/technical resources from project initiation through planning and execution of deliverables, following monitoring and controlling processes through to closing. The successful outcome increased customer satisfaction in the use of the upgraded application. (499 Characters)

3) PM of Warehouse Management System (WMS) Pipestone Warehouse Project.

Project objective was to relocate existing warehouse in Arlington, Texas to new distribution center in Dallas. Key deliverables were to integrate two existing SAP systems with new RF technology and associated interfaces to legacy systems. Managed initiation/planning phases to develop estimates and identify resources required for the project. Provided guidance to Infrastructure PM and technical resources with preparation of cost estimates and presentations to management.

(477 Characters)

Project objective was to develop cost estimates and a plan to relocate an existing warehouse to new, larger distribution center. Key deliverables were to integrate two existing SAP systems with new RF technology and associated interfaces to legacy systems. Managed functional and technical resources from initiation through planning, executing, monitoring and controlling through to closing of the initiative. The successful outcome was the presentation of the team findings to senior management. (499 Characters)

4) PM of Exchange Program Project.

Project involved migration from current Lotus Notes environment to Microsoft Exchange Mail. Scope included identification of outsourcing/hosting provider. The role of the provider would be to manage the future state of the proposed messaging environment once in place and functional. Key objective was to award the selected vendor with a 3 year agreement for the provision of Messaging Services. Managed PMO activities for the project with emphasis on planning, resourcing and financial reporting. (500 Characters)

Project involved migration from current Lotus Notes system to Microsoft Exchange Mail. Scope included identification of hosting provider. Key objective was to award the selected vendor with a 3 year agreement for the provision of Messaging Services and support and partnership in migration activities. Managed project initiation activities, planning and execution of deliverables, monitoring and controlling through project closing. The successful outcome was migration 10K of global users. (493 Characters)

5) PM of Consumer Relations Enhanced Reporting Project

Project involved deployment of Siebel Analytics solution to satisfy business objectives by providing timely, customized reports of consumer complaints leading to enhanced productivity for Marketing staff. Managed delivery of third party solution consistent with CS global technology standards specifications. Provided guidance to offshore provider (TCS) to deploy solution, database installation, provide end user training, Knowledge transfer to internal support staff and documentation. (490 Characters)

Project involved deployment of Siebel Analytics solution to satisfy business objectives by providing timely, customized reports of consumer complaints leading to enhanced productivity for company marketing staff.
